A proud part of **LALLEMAND**

Wanted: Electrical engineer for Denmark's yeast factory!

Would you like to contribute your electrical qualifications to CAPEX-projects in the processing industry? Would you like to be our electrical beacon in an all-round job, in which you can combine your qualifications within electrical engineering and technique? If so, we are looking for you!

For our project department in our factory in Grenaa we are looking for a new colleague, who will mainly be working with the electrical technology in CAPEX-projects. You will be part of our project department – along with you there are 5 colleagues reporting to the project manager. This position is a central part of the continuous positive development and growth strategy of De Danske Gærfabrikker.

Did you know that

The factory in Grenaa has 110 employees. We invest currently in the development of the factory, which appears as a modern company in growth. In our production process we do fermentation, packing, extraction, evaporation, membrane filtration as well as fluid bed and spray drying of different types of yeast, winemaking yeasts and other special yeasts and yeast extracts. The company has its own wastewater treatment plant as well as water and energy supply.

Specifically, we imagine that

- You have a background as e.g. electrical engineer, electrical contractor, electrician, or experience as automatic technical technician.
- You are part of the entire process from the preliminary idea phase to the final assignment of a project.
- You are dedicated to a job in which you can combine your qualifications and knowledge about electrical installations and process equipment with quality and communication.
- You thrive in a busy workday where you cannot predict everything. You are curious, and you see jobs and projects independently through.
- You contribute with openness; cooperation and you speak Danish fluently and you communicate well in English in writing as well as orally.

Your workday will also be full of

- Preparation of documentation material, so acquaintance of SEE Electrical is an advantage.
- Accomplishment of projects within electrical technology on the supply side as well as in the production.
- Quotation retrieval / pricing of electrical installations for CAPEX-projects as well as competent management of external electricians.

Why work with us?

You will be part of a comprehensive workplace with exciting fields of work. The job features a lot of challenges, presents a wide scope, and offers good professional as well as personal development opportunities.

You will have an alternating workday, filled with challenges with local focus, in an international group in an adaptable working climate in an informal tone and high spirits.

You will be given sparring and support from motivated and committed colleagues.
